

During his presentation, Terry Jamieson will be discussing small reactors from the Canadian regulatory perspective. He will start with a broad overview of the Canadian Nuclear Safety Commission (CNSC) and will then explain Canada's involvement with small reactors up to the present. Mr. Jamieson will then explore the CNSC's regulatory framework with regard to small reactors, touching on how the CNSC reviews reactor designs and how the organization would go about licensing an actual reactor. Mr. Jamieson will finish his talk by highlighting how the CNSC can help vendors avoid delays in the licensing process and how the CNSC is working with its international partners to further the CNSC's understanding of the small reactor world.
